Subject consultation on statement of public service principles

Is this just an uninspired attempt to rip-off the civil service values enumerated by countries such as the UK?

If so, stop wasting your time - noone should be under the illusion that just listing some values will change much. Moreover, you hardly need a consultation if this is the only limited aim - the values are surely pretty much the same in any public service organisation.

Content The focus of this consultation should be on identifying the particular factors or barriers at the EU level that lead to public service values NOT being enacted, and to propose concrete measures to improve the situation.

So, conflicts of interest would be my number one starting point.

Transparency would be another useful theme.
